#### **DETAILED ACTION**

#### **Priority**

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### Information Disclosure Statement

The information disclosure statement (IDS) submitted on March 15, 2004 has been considered by the examiner.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 3-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Ishida et al. (U.S. 2003/0134190 A1).

Ishida et al. teaches a cell comprising a lead [109/111], a stacked power generating element which comprises a positive electrode and a negative electrode [103, 104], a separator [107] and a core [102], wherein a lead [109, 111] which protrudes from the cell and takes current from said power generating element is fixed on said core. Figure 12 shows an embodiment

Art Unit: 1745

where the lead is connected to the positive electrode and negative electrode. See par. [0085]. The core is insulative at regions [110b]. See par. [0085].

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ishida et al. in view of Gauthier et al. (U.S. Pat. 5,415,954).

The teachings of Ishida et al. are discussed above.

While Ishida et al., in teaching a stacked type battery, does not explicitly teach a wound type power generating element, Gauthier et al. is relied upon to show that cylindrical, wound and stacked configurations are known art-recognized equivalents and would be an obvious substitution to the skilled artisan in recognition of the resultant compactness and ease of manufacture that is provided for by a wound configuration. See Figures 1F, 1G and 1H for the disclosed cylindrical, wound and stacked configurations and col. 1 line 6 et seq.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Although not presently relied upon as a basis for rejection, the examiner notes that

Application/Control Number: 10/707,109

Art Unit: 1745

JP 09-199178 as cited in the submitted Information Disclosure Statement similarly discloses equivalence between cylindrical, wound and stacked configurations for lithium batteries.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julian Mercado whose telephone number is (571) 272-1289. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick J. Ryan, can be reached on (571) 272-1292. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.

PATRICK JOSEPH RYAN SUPERVISORY PATENT EXAMINER
